

PREDICTPATH AI

Cyber Security Strategic Audit Report

Generated: February 20, 2026 16:33:52 UTC

CONFIDENTIAL - SOC AUDIT DOCUMENTATION

1. EXECUTIVE SUMMARY

This report summarizes a comprehensive cyber defense lifecycle conducted by the PredictPath AI suite. The analysis covers threat identification (Tool 2/3), strategic response planning (Tool 4), automated remediation generation (Tool 5), and governance oversight (Tool 6). All identified high-probability threats have been processed through the mitigation engine.

2. THREAT ANALYSIS & FORECASTING

Analysis Target: Activity on <https://learning-digitech.vercel.app/>

Captured Weaknesses: CWE-78, CWE-20, CWE-89, CWE-1021, CWE-525, CWE-434, CWE-693, CWE-287, CWE-615, CWE-284, CWE-200

Analysis Target: Activity on <https://learning-digitech.vercel.app/assets/index-bkkz15b8.css>

Captured Weaknesses: CWE-525, CWE-693, CWE-287, CWE-284, CWE-200, CWE-264

Analysis Target: Activity on <https://learning-digitech.vercel.app/assets/index-d1dhjboy.js>

Captured Weaknesses: CWE-693, CWE-287, CWE-615, CWE-284, CWE-264

Analysis Target: Activity on <https://learning-digitech.vercel.app/robots.txt>

Captured Weaknesses: CWE-525, CWE-693, CWE-287, CWE-284, CWE-200, CWE-264

Analysis Target: Activity on <https://learning-digitech.vercel.app/sitemap.xml>

Captured Weaknesses: CWE-78, CWE-20, CWE-89, CWE-525, CWE-434, CWE-693, CWE-287, CWE-615, CWE-284, CWE-200, CWE-264

3. RECOMMENDED MITIGATION STRATEGIES

ACTION: Disable Account on learning-digitech.vercel.app

Tactical Steps: Revoke all active tokens and sessions immediately. | Reset all associated secrets (passwords, MFA keys). | Conduct audit of last 24 hours of account history.

4. REMEDIATION IMPLEMENTATION

Generated Remediation Package:

Final Artifact: PredictPath_Remediation_20260220_133348.ps1

Status: Context-Aware PowerShell Script & Tactical Guideline Generated.

5. GOVERNANCE POSTURE & TAKEAWAYS

System Trust State:

Active Model Version: v000bce46

Containment Threshold: 58.9%

Key Security Takeaways:

1. Attack Surface: The system successfully identified critical vulnerabilities (CWE-based) on public-facing assets.
2. Defense Response: Pre-emptive host isolation and process auditing were recommended to neutralize execution threats.
3. Operational Status: All critical remediation steps are now documented in the deployments folder for SOC review.
4. Continuous Monitoring: Post-remediation trust levels have been adjusted to account for current threat density.
