

PREDICTPATH AI

Cyber Security Strategic Audit Report

Generated: February 20, 2026 16:40:36 UTC

CONFIDENTIAL - SOC AUDIT DOCUMENTATION

1. EXECUTIVE SUMMARY

This report summarizes a comprehensive cyber defense lifecycle conducted by the PredictPath AI suite. The analysis covers threat identification (Tool 2/3), strategic response planning (Tool 4), automated remediation generation (Tool 5), and governance oversight (Tool 6). All identified high-probability threats have been processed through the mitigation engine.

2. THREAT ANALYSIS & FORECASTING

Analysis Target: Activity on <https://learning-digitech.vercel.app/>

Captured Weaknesses: CWE-200, CWE-525, CWE-284, CWE-89, CWE-615, CWE-1021, CWE-287, CWE-20, CWE-693, CWE-78, CWE-264

Analysis Target: Activity on <https://learning-digitech.vercel.app/assets/index-bkkz15b8.css>

Captured Weaknesses: CWE-200, CWE-284, CWE-525, CWE-287, CWE-693, CWE-264

Analysis Target: Activity on <https://learning-digitech.vercel.app/assets/index-d1dhjboy.js>

Captured Weaknesses: CWE-284, CWE-615, CWE-287, CWE-693, CWE-264

Analysis Target: Activity on <https://learning-digitech.vercel.app/robots.txt>

Captured Weaknesses: CWE-200, CWE-284, CWE-525, CWE-287, CWE-693, CWE-264

Analysis Target: Activity on <https://learning-digitech.vercel.app/sitemap.xml>

Captured Weaknesses: CWE-200, CWE-525, CWE-284, CWE-615, CWE-89, CWE-287, CWE-20, CWE-693, CWE-78, CWE-264, CWE-434

3. RECOMMENDED MITIGATION STRATEGIES

ACTION: Isolate Host on learning-digitech.vercel.app

Tactical Steps: Disconnect host from all internal and external networks. | For Cloud/Web assets: Suspend deployment or enable 'Maintenance Mode' in console. | Scan all other hosts in the same segment for persistence.

4. REMEDIATION IMPLEMENTATION

Generated Remediation Package:

Final Artifact: PredictPath_Remediation_20260220_134030.ps1

Status: Context-Aware PowerShell Script & Tactical Guideline Generated.

5. GOVERNANCE POSTURE & TAKEAWAYS

System Trust State:

Active Model Version: v5ed6abc4

Containment Threshold: 50.5%

Key Security Takeaways:

1. Attack Surface: The system successfully identified critical vulnerabilities (CWE-based) on public-facing assets.
2. Defense Response: Pre-emptive host isolation and process auditing were recommended to neutralize execution threats.
3. Operational Status: All critical remediation steps are now documented in the deployments folder for SOC review.
4. Continuous Monitoring: Post-remediation trust levels have been adjusted to account for current threat density.
