

PREDICTPATH AI

Full-Chain Cyber Security Audit Report

Generated: March 18, 2026 15:02:40 UTC

CONFIDENTIAL - SOC AUDIT DOCUMENTATION

1. EXECUTIVE SUMMARY

Full threat detection and response lifecycle against log source 'nmap-20260311-201048.xml'. Tool 1 ingested 8 events (0 rejected), identifying 1 MITRE ATT&CK technique(s). Tool 2 reconstructed 1 behavioral session(s). Tool 3 generated 1 attack trajectory forecast(s). Tool 4 derived 1 targeted remediation action(s). Tool 6 updated the governance trust model and audit ledger.

2. TOOL 1 - EVENT INGESTION & INTELLIGENCE

Log Source:

nmap-20260311-201048.xml

8

0

2026-03-18T12:00:09.874176+00:00

C:\Users\cisco\Documents\pushing_Ni... edictpath-AI\Tool1\data\output

MITRE ATT&CK Techniques Detected:

T1046 - 8 event(s)

Severity Distribution:

HIGH 8 event(s)

Top Observed Hosts:

127.0.0.1 - 8 event(s)

3. TOOL 2 - BEHAVIORAL SESSION RECONSTRUCTION

Total Sessions:

1

Session: Activity on 127.0.0.1

Risk: Low Anomaly Score: 19.54

Blast Radius: 127.0.0.1

Summary: URGENT: Attacker has successfully achieved persistence or internal lateral movement. Data access is likely imminent.

4. TOOL 3 - PREDICTIVE ATTACK TRAJECTORY

Session: Activity on 127.0.0.1

Techniques: T1046

Host Scope: 127.0.0.1

Vulnerabilities: CWE-200

Model Confidence: 25%

Narrative: URGENT: Verified exploit patterns identified on Activity on 127.0.0.1. Attacker has likely bypassed initial defenses. An attacker exploiting these vulnerabilities is projected to pivot to 'Exploit Public-Facing Application' next (20% probability).

Projected Attack Scenarios:

[Medium] 20% probability - Exploit Public-Facing Application

[Medium] 12% probability - Exploit Public-Facing Application -> Command and Scripting Interpreter

5. TOOL 4 - ADAPTIVE RESPONSE DECISIONS

Decision 1: Activity on 127.0.0.1

Urgency: Low Confidence: 29%

Strategy: Automated containment strategy for Activity on 127.0.0.1 has been initiated to ensure defensive depth. The selected action, 'Enable Process Auditing', targets User 'Activity on 127.0.0.1' with an estimated risk reduction of 5.0% across the predicted trajectory.

-> Enable Process Auditing on [Activity on 127.0.0.1]

Risk Reduction: -5% Approval: No

- * Activate Sysmon or similar tool to track process creation.
- * Review command-line arguments for suspicious encoded strings.
- * Monitor for unauthorized use of living-off-the-land (LotL) binaries.

X Rejected: Isolate Host - Confidence (0.29) < Eff. Threshold (0.85)

6. TOOL 5 - REMEDIATION PACKAGE

Script File:

8. KEY SECURITY TAKEAWAYS

1. LOG ANALYSIS: 'nmap-20260311-201048.xml' yielded 8 events. 8 high/critical severity detected.
2. ATTACK TECHNIQUES: 1 MITRE ATT&CK technique(s) identified - T1046.
3. CVE INTELLIGENCE: 0 CVE identifier(s) observed from the VulnIntel database.
4. SESSION ANALYSIS: 1 session(s) reconstructed by Tool 2. 1 trajectory forecast(s) by Tool 3.
5. RESPONSE ACTIONS: 1 targeted action(s) issued. Actions: Enable Process Auditing.
6. REMEDIATION: Script 'PredictPath_Remediation_20260318_120213.ps1' generated - 1 action(s), 0 require approval.
7. TRUST STATE: 'Relaxing (Adapting)' - success streak 30, containment at 40.0%.
